

Paper Specifications

Our bookmarks are lithographically printed in full CMYK colour and sealed with a matt sealer on 350gsm silk art board.

This board is manufactured only using raw material pulp from:

- 1) By-products of forestation: trimming waste, forest clearing, forest fire prevention.
- 2) By-products of sawmills: wood shavings and waste.
- 3) Plantations developed/maintained/managed for the pulp industry.

All waste from the manufacture of the board is reduced, recycled and/or revalued for use in other areas, e.g. agricultural spreading etc..

All levels of the paper manufacturers and suppliers from which we source paper materials implement measures for the protection of the environment:

- Use of chlorine free pulp
- Use of derivatives from natural products (starches, chalk, clay)
- Clean energy management (electricity, gas)
- Research into energy economies
- Environmental audit of suppliers and mills.
